## “Your One, Pre-built Wireless Connector to Your NetSuite System”

Mobile Edge for NetSuite is a fast and easy way to extend your NetSuite environment to the BlackBerrys of your mobile employees. By using Mobile Edge for NetSuite, NetSuite users can get mission-critical information (such as contacts, opportunities and cases) on their BlackBerry device—anytime, anywhere, within seconds.

Mobile Edge for NetSuite offers remarkable configurability and ease of use for hassle-free deployment and management, and user-friendly screen scrolling (UI) on the BlackBerry. Pre-built based on Web Services, the flexible solution is designed around the needs of your mobile users.

Mobile Edge for NetSuite was created and is deployed by iEnterprises, Inc., a certified NetSuite SuiteFlex program partner.

### What Sets Mobile Edge for NetSuite Apart from Other NetSuite Mobile Providers

- 1) **Turn key.** Mobile Edge for NetSuite is an affordable “off the shelf” wireless CRM application that helps you get your NetSuite products onto the BlackBerry fast. We have done the work for you.
- 2) **Built on open standards** (Web Services). You have the peace of mind of an industry standards technology that has the flexibility to change and grow as your business does.
- 3) **Ease of use and configurability.** Deployment and management is hassle-free and happens in days, not weeks. Mobile Edge for NetSuite extends your existing your NetSuite environment so there is little learning curve required.
- 4) **True anytime, anywhere performance.** The Mobile Edge client/server based approach gives users instant access to information even when the device is out of coverage. This is different from a browser-based approach that can result in long data look-ups, slow or lost connections, and needless scrolling on your BlackBerry to get to the piece of information you want.

Mobile Edge for NetSuite is different. Its rich client provides the most relevant CRM data—retrieved, updated, and is stored on the device and your host server. You do not only get real-time online capabilities, you also get offline. This “true anytime anywhere” means you’re always connected and get faster access and up-loading all the time.

- 5) **Wireless CRM experts that give you a personalized approach.** Your iEnterprises team possesses over a decade of CRM and wireless experience and takes a consultative and focused approach to tackling “your top five” most pressing wireless needs.

## Key User Benefits

### 1) Your Mobile CRM for NetSuite

Mobile Edge for NetSuite enables you to access mission critical data anytime, anywhere, giving you immediate wireless access to your NetSuite system when you're away from the office. Mobile Edge for NetSuite retains the data integrity of your NetSuite system. Your mobile professionals gain peace of mind and extra productivity wherever they may be.

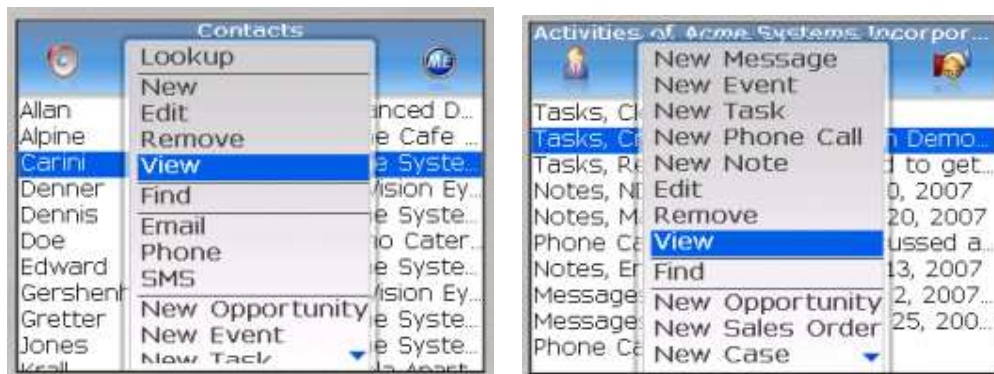

### 2) Conveniently Deployed the Way You Want It

Like your NetSuite system, Mobile Edge for NetSuite is deployed in a hosted environment. "Click not code" makes it affordable to small-medium businesses, and deployed in days—not weeks. You also get personalized care by a team of wireless CRM experts—you're not "just a number."

### 3) User-friendly and Configurable

MobileEdge for NetSuite allows you to adjust applications on BlackBerry devices without a learning curve and hefty customization or consulting costs. Multilingual capabilities also make global communications easy.

### Mobile Edge Specification

**Mobile Edge Server Requirements** – Base server requirements are provided below for the Mobile Edge Server. The requirements listed below are considered to be a base configuration for 200 or fewer users with a limited data set.

**CPU** – Single or Dual Processor Pentium 1Ghz or better processors are recommended.

**Disk** – 50 Gigabytes free disk space is recommended on a Raid configuration. Raid 0+1 is recommended for best performance.

**LAN** – A 100 Megabit Local Area Network connection is recommended.

**Memory** – 2 Gigabytes of free memory is recommended. This should be the amount of memory free after other applications have loaded.

**OS** – Windows 2000 or 2003 Server or SUSE Enterprise Version 10.1 or better.

**BlackBerry Enterprise Server** – The BlackBerry Enterprise server is required to enable push transactions to BlackBerry devices. BlackBerry Enterprise Server Version 2.2 for Domino or Version 3.6 for Exchange is required.
